

EBA #3 Google

Google is making us more and more stupid. People now depend on the internet too much. With everything just a click away. Article A, B, and C talk about the problems with the internet. Google does negatively affect our intelligence as it gives false information, makes things too easy, and weakens our ability to memorize.

First of all, Google gives false information. According to article C it says, “The internet is filled with incorrect information, which may lead to being misinformed.” With false information people will think they know things but don’t really know. This proves that google makes us dumber as it teaches us incorrect facts. Article B states, “Almost instantly, a raft answers and articles on screen.” This means that google gives a lot of information instantly. The problem is most of the answers are correct.
